2005 COMMODITY INSURANCE FACT SHEET

Processing Sweet Corn

Iowa, Minnesota, and Wisconsin

Crop Insured

The crop insured will be all processing sweet corn grown in the county on insurable acreage, for which premium rates are provided, in which you have a share, and grown under and in accordance with the requirements of a processor contract executed by the acreage reporting date.

Counties Available

Processing sweet corn is insurable in 20 counties in Iowa, 38 counties in Minnesota, and 39 counties in Wisconsin. In counties where premium rates are not published, processing sweet corn may be insurable by written agreement.

Causes of Loss

Adverse weather conditions¹
Failure of irrigation water supply²
Fire³
Insects⁴
Plant disease⁴
Wildlife

¹Including hail, frost, freeze, drought, and excess precipitation.* ²If caused by an insured cause of loss. ³If due to natural causes. ⁴But not damage due to insufficient or improper application of pest or disease control measures.

*Specifically: Excessive moisture that prevents harvesting equipment from entering the field or prevents the timely operation of harvesting equipment. Also abnormally hot or cold temperatures that cause an unexpected number of acres over a large producing area to be ready for harvest at the same time, affecting the timely harvest of a large number of acres or processing of such production is beyond the capacity of the processor, either of which causes the acreage to be bypassed.

Insurance Period

Insurance coverage begins when the processing sweet corn is planted, and will end at the earliest of:
(1) total destruction of the crop, (2) when the processing sweet corn should have been harvested, but was not, (3) abandonment of the crop, (4) Harvest of the crop, (5) the date you harvest sufficient production to fulfill your processor contract if the processor contract stipulates a specific amount of

production to be delivered, (6) September 20, 2005 in Minnesota and Wisconsin; September 30, 2005 in Iowa or, (7) final adjustment of the loss.

Reporting Requirements

Acreage Report — You must report all your processing sweet corn acreage in the county by the acreage reporting date.

Important Dates

Sales Closing/Cancellation Date	March 15
Final Planting Date	June 20
Acreage Reporting Date (IA/MN).....	June 30
Acreage Reporting Date (WI)	July 15
Premium Billing Date	October 1
Production Reporting Date	April 29

Definitions

APH Yield — Actual production history (APH) yield used to determine the production guarantee. The APH yield is based on up to 10 years of actual and/or assigned yields.

Unit — The insurable acreage used to determine the APH yield, the production guarantee, and any indemnity (loss payment).

Production Guarantee — Number of tons guaranteed per unit. Multiply your APH yield per acre x the coverage level percentage you select x the number of acres in the unit.

High Risk Land (HRL) — Land designated on a map in the actuarial documents with a high risk rate classification, requiring a higher premium rate due to higher risk.

HRL Exclusion Option — An agreement to exclude from crop insurance coverage ALL high risk land by crop and county, as signed on our form by the sales closing date. Catastrophic coverage is still available when this option is in effect.

Coverage Levels and Premium Subsidies

Processing sweet corn may be insured at the coverage

levels shown in the table. Crop insurance premiums are subsidized as shown. For example if you select the 75-percent coverage level, your coverage will be 75 percent of your approved APH yield, the premium subsidy is 55 percent, and your premium share is 45 percent of the base premium. Catastrophic coverage (CAT) is available at 50 percent of your APH yield and 55 percent of the established price election. The total cost for CAT coverage will be an administrative fee of \$100 per crop per county, regardless of the acreage. Administrative fees, in addition to premium costs, for coverage levels above CAT are \$30 per crop per county.

Item	Percent					
Coverage Level	50	55	60	65	70	75
Premium Subsidy	67	64	64	59	59	55
Your Premium Share	33	36	36	41	41	45

Price Elections (APH plan)

Price of compensation per ton in case of loss:

Established price: IA and MN — \$50.00 per ton

Established price: WI — \$45.00 per ton

Insurance Units

Basic Unit: If the processor contract specifies the number of acres to be planted, a basic unit consists of all your insurable processing sweet corn acreage in the county by share arrangement. If the processor contract specifies the amount of production to be delivered, a basic unit consists of all acreage planted to the insured crop in the county that will be used to fulfill contracts with each processor. Premiums are reduced by 10 percent for a basic unit.

Optional Unit: When the processor contract specifies the number of acres to be planted, and if a basic unit consists of two or more sections of land and certain record keeping requirements are met, you may apply for optional units by section. The 10-percent premium discount will not apply. Optional units are not available if the processor contract stipulates the amount of production to be delivered.

Plans of Insurance

Actual Production History (APH) — Production guarantee based on **individual** yield history. Optional and basic units are available.

Group Risk Plan (GRP) — Coverage available by written agreement only under the GRP Corn policy. GRP insures against **widespread** loss of production based on **county average** yields. No individual loss protection available.

Group Risk Income Protection (GRIP) — Coverage available by written agreement only under the GRIP corn policy. Combines GRP with price protection to

insure against **widespread** loss of revenue due to a combination of low yields and/or low prices. No individual protection available.

Late Planting and Prevented Planting

These provisions provide protection on acreage that is planted after the final planting date or that cannot be planted. Not available for all plans of insurance. Please consult a crop insurance agent for details.

Loss Example (IA/MN)

A loss occurs when the tons of processing sweet corn produced for the unit fall below the production guarantee as a result of damage from a covered cause of loss. This example assumes a 6.0 tons per acre APH yield, 65-percent coverage level, 100 percent of the established price, and basic unit coverage.

$$\begin{array}{r}
 6.0 \text{ tons per acre APH yield} \\
 \times .65 \text{ coverage level} \\
 \hline
 3.9 \text{ tons guarantee*} \\
 - 1.0 \text{ tons per acre actually produced} \\
 \hline
 2.9 \text{ tons per acre loss} \\
 \times \$50.00 \text{ price election} \\
 \hline
 \$145.00 \text{ gross indemnity*} \\
 - \$6.00 \text{ estimated premium per acre (varies)} \\
 \hline
 \mathbf{\$139.00 \text{ net indemnity*}}
 \end{array}$$

* Figures shown on a per acre basis; guarantees and losses paid are on a unit basis. See policy provisions.
